CoAID News and FakeHealth HealthStory

Validate identities, versions and dataset labels

ENGAGEMENT

Engagement populations
Unique observed-post counts
Include zero-post entities

CoAID hurdle; FakeHealth NB2
Standardized Fake/Real
expected-post ratios

Independent overlap-cluster
resampling within each dataset
Percentile intervals

Cross-context ratio-of-ratios
Prespecified engagement sensitivities
RQ1

Independent COVID-Rumor NEWS
Inherited True/False annotations
Quality and exact-overlap screening
External text evaluation only

Extension: FakeNewsNet (PolitiFact, GossipCop)
Title-only LR external target (Table S13)
Engagement under frozen estimand (Table S17)
Supplementary; no frozen result changes

TEXT

Separate text populations
Quality filters and resource/text leakage groups
Engagement is excluded from predictors

Grouped source-only selection
Within-context fits: training pools
Evaluation: reserved holdouts
RQ2

Transfer fits: all eligible source rows
Locked source-selected configurations
Cross-context evaluation; no target tuning
Matched target holdouts are primary

Frozen full-source LR/SVM only
Common COVID-Rumor NEWS target
No target fitting or tuning
RQ3

Separate supporting checks
Lexical audit: within-context LR models
Publisher, representation
and transformer checks

Supporting checks
